

The best way of evaluating a software system,
short of using it, is viewing the user interface.

- Is the proper data on the screen for the operator?
- Is the data displayed in a logical manner which is easy to work with?
- Does the System have the features necessary to operate the central efficiently?

Alarm Center®

Sample Screens

These screens are just a small sampling. They are intended to provide you with a "feel" for the System. They were developed by working side-by-side with your industry colleagues and are based upon the proven track record of our previous systems. Compare them with your current system or others that you are evaluating, we are confident that you will agree, the Alarm Center® is "superior by design".

We Monitor the World™

The Main Dispatch Screen

This is the basic dispatch screen for the Alarm Center® Monitoring/Dispatch Module. The Log Screen records a summary of actions taken by the dispatcher in the lower right quadrant.

Important subscriber data remains displayed throughout the dispatch.

Select any tab to display additional information.

Quick access icons for specific information pertaining to this account.

The tripped zones can be selected for further detail.

A complete and detailed log of all activity on this signal is displayed throughout the dispatch.

The current signal information is displayed here and is color coded for quick recognition.

Call responsible parties by simply clicking here.

Signal Log Summary:

Time	Action	Operator	Note
10:38 AM	Acknowledged	SIS	
10:39 AM	Premises Phone - 407-345-1550	SIS	No answer
10:39 AM	Police - 407-555-1212	SIS	Dispatched police depart
10:40 AM	Smith, Bill (President) - 407-555-0880	SIS	Notified owner, will call b.

Number Description

Number	Description
1	Lobby - Front Door Contact
3	Lobby - Motion Sensor

Traffic Screen

These screens display all signals pending to be processed sorted by priority, date, and time order. We refer to these screens as the "traffic screens".

Select Auto Mode to automatically dispatch signals based on priority to the next available dispatcher, or manually select the signal to dispatch.

All pending signals are displayed based on priority, date & time order.

Signals are color coded for quick recognition.

If a signal is placed on hold, the time and operator are automatically indicated.

At all times, on every screen, the number of signals pending and on hold are displayed, the left portion of the line is used for status messages.

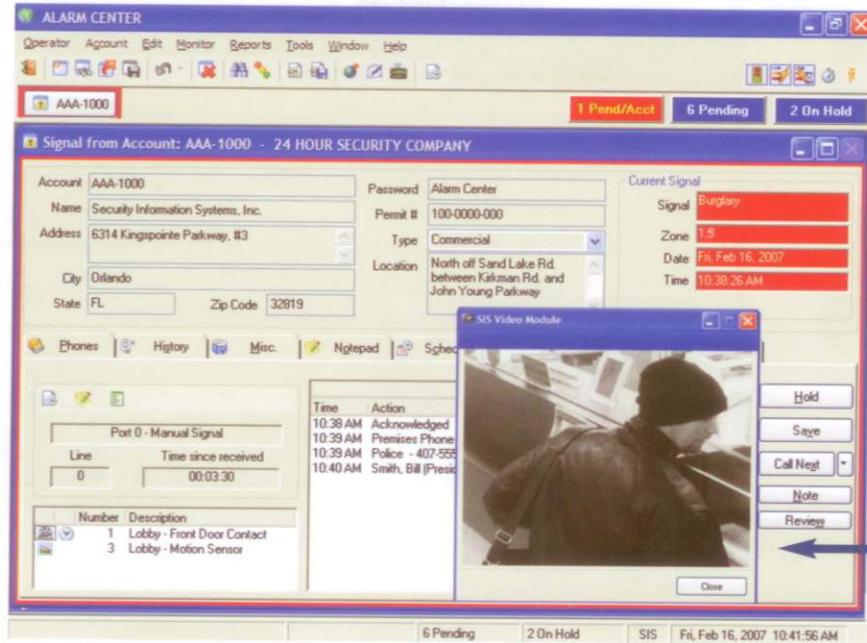

6 Signals Pending

Acct. Number	Subscriber Name	Signal Description	Zones	Time	Priority
