

# Alarm Center® SyncAgent Module

## SYSTEM PERFORMANCE

Automatically synchronize your Alarm Center program files and settings from one server to another.

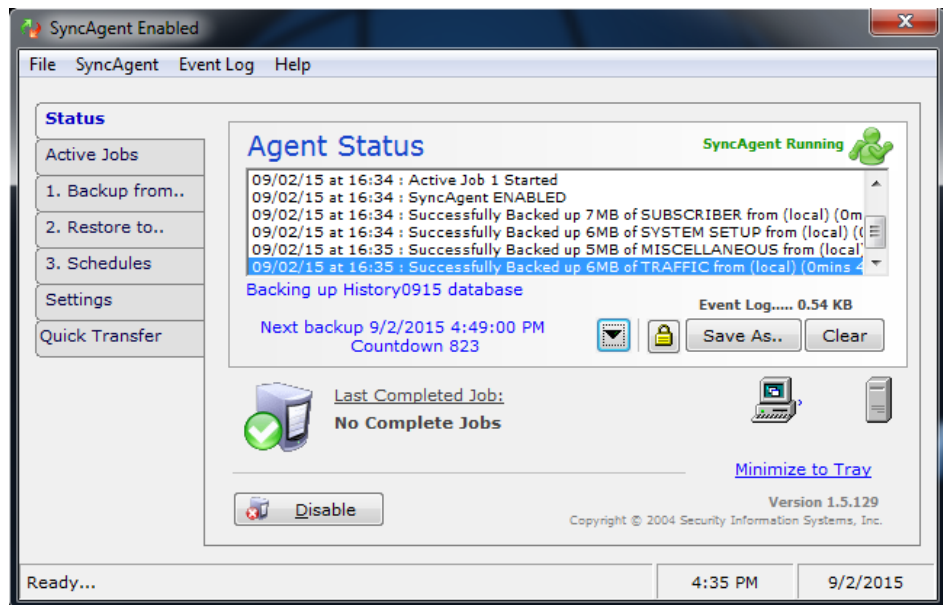

Creates a unique copy of each backup; restore data to a specific date and time.

Supports daily and hourly backup schedules. Database synchronization can occur up to every 15 minutes, 24-hours, or a specific day/time of the week.

Runs as a Windows service, starting automatically and using minimal resources while quietly running in the background.

The Alarm Center® SyncAgent Module greatly reduces the resources needed to perform critical and necessary data synchronization, backup, and restore while offering you a simplistic interface.

SyncAgent allows to backup from the primary SQL server and restore it to another server(s) on your network automatically.

During this process the program can also create a unique copy of every backup in case you need to rollback your data to a specific date and time.
