The Alarm Center® Video Integration Module allows your operators to view live and pre-recorded video of your subscriber's home/business during the event of an alarm. Video verification is used to significantly reduce false alarms and identify real emergencies.

When a signal comes into the dispatch center, operators will be prompted to view pre or post alarm video and/or live video of the violated zone(s).

Alarm Center® will connect to the remote devices and display high quality streaming video. Video monitoring can also be used to take advantage of a new stream of recurring revenue as it offers additional services to your subscribers.
