ALARM CENTER®

We Monitor the World™

Additional Modules

Alarm Center can accommodate your needs whether you are building your security system from the ground up or looking to make improvements to the security infrastructure already in-use. With over thirty years of industry experience, Alarm Center offers one of the industry's largest libraries while integrations to new, state of the art technologies are developed as the security industry rapidly evolves.

GRAPHICAL AID/MAPPING

Used to graphically present an alarm notification at a location using building schematics, floor plans, etc.

SYNC AGENT

Used as the Alarm Center database back-up and restore utility.

VIDEO INTEGRATION

Instantaneous video verification of signals, reducing false alarms & response times.

WEB SUITE

Allows for remote "read only" access to your end user's account information.

ACCESS CONTROL SYSTEM INTEGRATION

Used to integrate access control alerts and provide access to secure areas using keycards.

COMPUTER-AIDED DISPATCH (CAD) INTEGRATION

Used to automate communication between alarm monitoring central stations and public safety 911 dispatch centers ensuring faster, more accurate emergency response.

DEALER ACCESS

Allows remote dealers access to add/edit accounts, generate reports, disable accounts, place an account on test, etc.

PRINTER CATCHER

Used as a virtual printer, replaces the need for a dot matrix printer connected to an alarm receiver.

SERVICE

Used to track and schedule service requests, track inventory, service contracts, and more.

BILLING

Used for one-time and recurring billing and interfaces with QuickBooks Pro for invoicing.

REPORTER

Used for secondary monitoring, reporting, and text or email notifications.

CUSTOM INTEGRATION

Custom software integration services by request.

Further customizations and integrations can be made in consultations with one of our Account Executives.
